

Journal

From April 18 to April 22,

During this week all the things were normal and the activities planned for the week could be develop, I worked my hours completed in each group.

According to 6a we develop many thing we tried to be in the same level of the class of the another group because we have lost 1 or 2 classes , the behavior started to show me something different in this week with then they were a little more better in term of behavior , they were so exited this week , and enjoyed the English 's classes, I implement a new way to control them in class I wrote in the board a number and each number belong to on student and if at the end of the class the students has 3 x he or she is going to sign the diary that school manage and that idea made them to be shy and paying attention .

In term of behavior a implement the same idea but in this group the result were better because in this class 6d students are more misbehave than in 6a , the liked so much the activities that we did like construct your dream house using cardboard paper magazines and so on , the worked so well , participated in the description and enjoyed .
